Jacksonville – A 7 Figure City

Fill in the appropriate terms into the missing blanks for the article "Jacksonville – A 7 Figure City" below. Each term will only be used once.

Immigration	Birth rate	Logistic growth
Emigration	Death rate	Exponential growth
Abiotic	Density-dependent	Population
Biotic	Density-independent	Carrying capacity

Jacksonville began as an Indian nation that grew due to European (__1__). As the population of Spanish, French, and British people increased, the number of Indians dropped, which was partly due to an increase in (__2__) from the aggressiveness of the incoming populations. In addition, the European settlers gradually forced many Indian tribes out into the frontier parts of the US through (__3__). The area became known for its plantations and lumber, which depended on the (__4__) contribution of the land and weather but produced (__5__) yields that helped the local economy. Fortunately, Jacksonville was north of some of the (__6__) factors such as mosquitos, diseases such as yellow fever, and swamps that delayed the growth of southern Florida. During the 1800-1900's, the growth rate gradually increased in the S-shaped pattern known as (__7__) rather than the J curve seen in (__8__). By the 21th century, the (__9__) and the influx of people from other states and countries has resulted in an urban and suburban (__10__) of close to 1 million. One question remains: are we reaching the (__11__) or can we continue to absorb more new Floridians without being overcrowded or limiting (__12__) resources?
